

**Santiago Martín** was born in Valladolid, Spain on 1984. A year after his graduation at Oviedo University in Mechanical Engineering (2008), he started his Master's Degree on Industrial Design Management (Oviedo University 2007/09). Then, Santiago started to work at Prodintec Foundation, Technologic Center of Asturias (Gijón, Spain 2008/10) as designer for additive manufacturing. At the same time, he was postgraduate in Mechanical Engineering, Design, Construction and Fabrication (Oviedo University 2009/10). He also has participated as lecturer in numerous university courses related with industrial design methodology, design tools and rapid manufacturing. He actually co-founded vortica: cognitive engineering for design (2010) as an ambitious project focused on generative engineering and generative product design and development behind a real multidisciplinary approach.

Santiago loves to be in touch with different profiles, as the only way to crew in a personal and professional way. He also loves running and cycling.
